

Hotide Biotech: Advanced Quality Methodology & U.S. Regulatory Framework

Ensuring Global Compliance and Traceability for Peptide API
Manufacturing

HANGZHOU HOTIDE BIOTECH CO., LTD.

Hangzhou, China

Quality by Design: Our Commitment to Pharmaceutical Excellence

"Research and production of high-purity peptides with a spirit of craftsmanship."

Our mission is to bridge the gap between innovative research and large-scale pharmaceutical manufacturing through meticulous attention to detail.

Quality Culture

Quality is not an act, but a habit integrated into every step of our synthesis and purification processes, ensuring consistent API purity.

Strategic Vision

Building a structured, compliance-driven platform for international pharmaceutical partnerships, prioritizing U.S. and EU regulatory standards.

Verifiable U.S. Regulatory Presence Ensures Market Readiness

FDA NDC LABELER CODE 83783 Authorized identification for drug listing and compliant commercialization in the U.S. market. Enables seamless regulatory reporting and product identification.	DUNS NUMBER 699396897 Globally recognized business identifier (Dun & Bradstreet) required for all FDA registrations and U.S. regulatory interactions, confirming corporate traceability.	QUALITY SIGNAL Traceability Full corporate transparency aligned with U.S. regulatory infrastructure, providing partners with financial and operational credibility and risk mitigation.
--	---	--

Facility-Specific Regulatory Recognition via FDA FEI Registration

FDA ESTABLISHMENT IDENTIFIER

FEI: 3030354900

Confirms a registered manufacturing facility subject to the FDA's rigorous oversight and inspection framework, ensuring compliance at the production level.

IMPLICATIONS FOR PARTNERS

- ✓ **Facility-Level Traceability:** Direct link between the product and the specific manufacturing site.
- ✓ **GMP-Aligned Structure:** Operational framework designed to meet international quality standards.
- ✓ **Inspection-Ready:** Environment maintained for immediate regulatory or partner audits.

Technical Robustness Validated by U.S. FDA Drug Master File

U.S. FDA DRUG MASTER FILE

041744

Type II — Active Pharmaceutical Ingredient

COMMERCIAL VALUE

Our partners can reference this DMF in their ANDA/NDA submissions, significantly reducing regulatory hurdles and accelerating time-to-market for finished dosage forms.

TECHNICAL DOCUMENTATION DEPTH

- ✓ **Synthesis & Manufacturing**
Detailed confidential data on API synthesis pathways and manufacturing process controls.
- ✓ **Quality Control**
Comprehensive raw material controls, specifications, and impurity profiling.
- ✓ **Stability & Packaging**
Long-term stability data and validated packaging systems ensuring product integrity.

Structured Peptide Synthesis and Purification Workflow

End-to-End Control

Full oversight from raw material sourcing to final API packaging.

Advanced Processing

Utilizing state-of-the-art lyophilization for API integrity.

Operational Excellence

Strict GMP monitoring ensures batch-to-batch consistency.

QMS Framework Aligned with GMP and ICH Q7a Standards

 CAPA Management Robust Corrective and Preventive Action procedures to identify, investigate, and resolve quality issues.	 Change Control Systematic approach to managing changes in processes, equipment, or materials to maintain validated state.	 Deviation Mgmt Formalized reporting and investigation of any unplanned events to ensure product quality impact is assessed.	 Risk Management Quality Risk Management (QRM) integrated into the lifecycle of the product following ICH Q9 principles.
 Document Control Strict management of SOPs, batch records, and specifications to ensure data integrity and traceability.	 Training Systems Comprehensive training programs for all personnel to ensure competency in GMP operations.	 Supplier Mgmt Rigorous qualification and monitoring of raw material suppliers to ensure supply chain security.	 Self-Inspection Regular internal audits to verify compliance with GMP requirements and drive continuous improvement.

State-of-the-Art QC Lab with Validated Analytical Systems

ANALYTICAL INSTRUMENTATION

Advanced Systems

Equipped with high-performance Agilent HPLCs and GCs, and Shenghan IC systems for precise impurity profiling and assay testing.

Data Integrity

All QC operations follow strict GMP requirements for data reliability, ensuring ALCOA+ principles are maintained across all electronic records.

Key Inventory:

- 2x Agilent HPLC Systems
- 1x Agilent GC System
- 1x Shenghan IC System

SPECIALIZED FACILITIES

Dedicated Lab Areas

Purpose-built rooms for stability testing, retention samples, moisture determination, and physical-chemical analysis.

Microbial Testing

Class D clean area specifically designed for microbial testing, ensuring the highest standards of sterility and safety for peptide APIs.

Compliance

Full alignment with ICH Q7a and GMP standards for laboratory control and material management.

Integrated Environmental, Health, and Safety (EHS) Management

PROCESS SAFETY

- ✓ Fire & Explosion-proof Management
- ✓ Dangerous Chemical Safety Protocols
- ✓ Work Permission & Access Control
- ✓ Rigorous Compliance Auditing

OCCUPATIONAL HEALTH

- ✓ Comprehensive PPE Requirements
- ✓ Emergency Response Management
- ✓ Regular Health Monitoring
- ✓ Contractor Safety Management

ENVIRONMENT

- ✓ Advanced Waste Management Systems
- ✓ Accidental Release Prevention
- ✓ Resource Efficiency Initiatives
- ✓ Global Environmental Compliance

Hotide: Your Strategic Partner in Peptide APIs

Combining **FDA Registration**, **Facility Traceability (FEI)**, and **DMF-backed Technical Depth** to provide a structured, compliance-driven quality platform for international pharmaceutical excellence.

HEADQUARTERS

 Yinfeng Road 129th, Qiantang District, Hangzhou, China
