Sample Name # TEST OMEGA
DEMO

Requested by # Teletest Analytika SA
Sample Number **18267598** Receipt Data: 01/10/2026 10:29

Report Validation and Issue Date **01/10/2026 10:33** Centro Demostración

Assessment Report

Report addressed exclusively to the healthcare professional prescribing the test to the patient. The indicated assessments have been made based on the results obtained and the data provided to the laboratory and should be assessed together with the patient's history. It is a guide to help interpret the results, it does not constitute a treatment by itself. The treatments must be implemented and supervised by health professionals.

Omega Test

Functional pattern

●	**Inflammation**	**Risk**
		- Reduced levels of **omega 3** .
		- The **AA/EPA ratio** is slightly elevated .
⚠	**Nutrition**	**Unbalanced**
		- A deficiency of **essential fatty acids** .
		- A greater metabolic need for **Zinc** .
	Neurobiology	Without alterations
	Mitocondrial membrane	Without alterations

Assessment

RECOMMENDATIONS

Altered inflammatory markers are linked to imbalances in the production of pro- and anti-inflammatory prostaglandins and to the health of our cell membranes. Treatment should be evaluated based on the severity and duration of the inflammation.
- Supplement with oral capsules containing **EPA and DHA** to improve the omega 3 index.

Imbalances in **omega-7** distribution can indicate alterations in the various mucous membranes of our body (ocular, oral, intestinal, and vaginal). Palmitoleic acid supplementation is recommended, and depending on the type of mucous membrane affected, probiotics, hydration, and/or L-glutamine may be added.

An imbalance in fatty acid metabolism affects our ability to absorb or utilize key cofactors such as vitamins and minerals. Specific supplementation with the following is recommended:
VITAMINS : B5 and B7
MINERALS : Zinc (Zn) and Magnesium (Mg).
