COLWAY TRICHOLOGY

Next-Generation Hair Care Line: Follicular Stem Cell Activation

PHARMACIST TECHNICAL MONOGRAPH

PRIMARY ACTIVE FOCUS: BAICAPIL™ 2% & STEM CELL REGISTRATION

Evolving from traditional diosmin formulations, Colway's enhanced hair care system incorporates **Baicapil™ at an optimal 2% concentration**. Baicapil™ directly targets cellular mechanisms within the hair follicle bulge area to reactivate dormant follicle stem cells.

1. HFSC Stem Cell Activation

Stimulates hair follicle stem cells (HFSCs) in the bulge region, initiating metabolic renewal and promoting cellular proliferation.

2. Anagen Phase Prolongation

Forces hair follicles into the active growth (anagen) phase and significantly extends its duration, delaying onset of catagen.

3. Telogen Shedding Reduction

Prevents follicle miniaturization and premature shedding, resulting in measurable increases in total hair density and fiber caliber.

1. Hair Strengthening Shampoo

Designed for daily trichological cleansing. Prepares the scalp substrate while delivering concentrated bioactive compounds directly to the follicular unit.

Baicapil™ (2%) — STEM CELL TARGET

Botanical complex (Baikal Skullcap, Soy & Wheat extracts). Rich in Baikalin; reduces scalp micro-inflammation while prolonging the anagen growth cycle.

Kerascalp™ (Amla Extract) — FOLLICLE INTEGRITY

Enhances Collagen XVII expression at the stem cell niche. Prevents follicle miniaturization, increases hair density, and slows depigmentation (graying).

Hydrafeel® (Pantotrophin 3) — HYDRATION / BARRIER

Advanced Provitamin B5 derivative. Binds intrinsic moisture, shields hair shaft from thermal/environmental stress, and protects color-treated hair.

2. Hair Strengthening Conditioner

Synergistic post-shampoo therapy. Restores lipid equilibrium, enhances tensile elasticity, and establishes a protective matrix against environmental damage.

Baicapil™ (2%) + Kerascalp™ — STEM CELL TARGET

Reinforces primary active pathway to maintain optimal follicle metabolism, density enhancement, and anti-aging protection.

Cottonseed & Sweet Almond Oils — LIPID & NUTRITIONAL MATRIX

High in essential unsaturated fatty acids and linoleic acid. Restores cortical lipid barrier, smooths cuticle, prevents split ends, and calms scalp irritation.

Horsetail Extract & Hydrafeel® — STRUCTURAL FORTIFICATION

Silica-rich extract fortifies keratin structural matrices, detoxifies the scalp environment, and guarantees sustained hydration.

CLINICAL & BIOMARKER EFFICACY SUMMARY

+49%	+17%	COL-XVII	2.0%
HAIR COUNT INCREASE (84 DAYS)	HAIR THICKNESS IMPROVEMENT	COLLAGEN XVII EXPRESSION BOOST	OPTIMAL BAICAPIL CONCENTRATION

PHARMACEUTICAL RATIONALE & PATIENT COUNSELING

Mechanism of Action: Moves beyond traditional vasodilation (diosmin) to stem cell reactivation (Baicapil™ 2%), stimulating quiescent bulge stem cells directly.

Indication profile: Telogen effluvium, androgenetic thinning support, fragile/weakened hair post-stress/treatment, premature hair aging/depigmentation.

Patient Regimen: Daily application of Shampoo to wet scalp, massaged to stimulate microcirculation; followed by Conditioner left for 2-3 minutes to seal active components into hair shaft and scalp.

Commercial Alignment: Formulated for simultaneous availability with saliva diagnostic sample collection to ensure immediate treatment compliance.
